STRYÜM®

NON-COMBUSTIBLE ALUMINIUM FAÇADE / MANUFACTURED BY FAIRVIEW

AUSTRALIAN MADE, VERSATILE, NON- COMBUSTIBLE, STYLISH, RECYCLABLE, EASY-TO-INSTALL SOLID ALUMINIUM CLADDING SYSTEM

POWDER COAT

Powder coating is a process by which electrically charged paint particles are sprayed onto Stryüm's aluminium surface. The aluminium is then cured through baking in a specialised oven to produce a highly durable, flat, powder-coated finish.

Stryüm's powder coat range utilises the Interpon Commercial Collection, with the full range of Dulux finishes also available. Can't find a colour that suits? Custom finishes are also available for any landmark or special project. All standard and custom colours are available in a variety of gloss levels, metallic shades and textures. Consequently, Stryüm customers have access to an almost limitless choice of powder coated finish options, capable of suiting any architectural application and environment.

ANODISING

Anodising is an electrochemical process of highly controlled oxidation of the aluminium product. This process transforms the surface into a highly durable, corrosion resistant finish that maintains a natural yet highly variable look.

Stryüm anodised finishes are available in a wide variety of clear, coloured and metallic dyes. Custom colours are also available for landmark projects. This unlimited versatility provides Stryüm customers with a plethora of options to suit any appearance or application requirement while retaining the unparalleled environmental resistance of anodised products.

WOODGRAIN

Stryüm features the ezy HD² wood effect coating, a technology unique to the Australian market. This technology allows for textured woodgrains with a raised grain and much greater durability than traditional methods. This process is achieved through a powder coat process and has the same durability as our powder coat finishes. Stryüm woodgrains are available in a multitude of woodgrain finishes, with custom woodgrains available for landmark or special projects.
